

ClearBlue Bluetooth TV/Audio Listening System

Not just a pretty face.

The ClearBlue Listening System provides wireless connectivity to TV, Audio & Cellular. The perfect solution if you are looking to enjoy TV and music at the volume level you enjoy without disturbing everyone else in your home!

ClearBlue™ Does it all.

Pumping up the volume may be cool for teens in a rock band but not for watching TV in your living room. If you're turning up the sound on your TV loud enough to disturb others, you're not alone.

The ClearSounds ClearBlue™ TV/Audio Listening System provides the ultimate solution while offering high-fidelity sound that you not only hear but feel and experience.

The ClearBlue System focuses on acoustical integrity in a stylish, comfortable design. ClearSounds®, a worldwide leader in amplified communications products, has developed a wireless Bluetooth TV/Audio listening system dubbed ClearBlue™. It allows hearing-impaired viewers or anyone in your home to hear TV programs clearly and without distortion, while allowing you to keep your TV's volume below space shuttle re-entry level. In addition, the ClearBlue headset will pair with any Bluetooth enabled device offering total value as you connect with high fidelity sound to your cell phone, iPod and iPad.

ClearBlue™ is not only gorgeous, it does it all. Listen to TV with the ClearBlue headset and transmitter, enjoy and experience your music by pairing with Bluetooth enabled audio device and take mobile calls with the push of a button. Your music will pause or your TV program will mute while you take the call and will resume after you hang up.

Connect, communicate, celebrate with ClearSounds.
